Say Yes to less marking

Less marking

More time

... Assessment should be for learning, and in recent trials enthusiastic teachers agreed that not only did the system provide a superb resource to enhance classroom practice but that it also dramatically reduced the burden of marking ...

The vast majority of teachers use past exam papers as part of their summative assessment processes and to enhance their understanding of the level at which children are working. Inevitably, this results in a burden of marking and cross-referencing data. SiR, working with QCA, has developed a system designed to remove this burden and at the same time enhance both the diagnostic element of testing, and the degree to which it can be integrated into classroom activities.

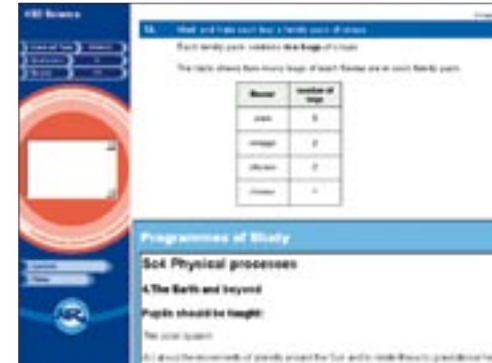

Say Yes to less marking

Reduce your work load

The program consists of a management system connected to sets of past National Curriculum test papers for English, Maths and Science at KS 1, 2 and 3. Additionally both optional and progress papers are included for years 3, 4, 5, 7 and 8.

It distinguishes between teachers and students by their individual log-on. These lead either to the pages that organise people, the tests and the results or, for learners, to the tests that have been assigned to them, and their feedback.

Features and Benefits

Test analysis charts

Once a teacher has identified individuals or groups, the system will

- assign and deliver papers
- mark answers, where possible, and show individual test histories
- "switch off" individual questions as required
- allow teacher override, manual marking and manual entry of past scores
- store teacher comments for feedback against papers or questions

Features and Benefits

Whole class report

- analyse individual results to show areas of strength and weakness
- analyse results to show a student's present level in the three subjects

Progress graph
